PRESS RELEASE

INVSAT LIMITED ANNOUNCES INITIATIVE FOR MOBILE TELEMEDICINE MARKET

Westhill, Aberdeenshire, June 2002 - Invsat Limited, the VSAT and systems integration subsidiary of Inmarsat Ventures plc, has announced details of an initiative with London-based TeleMedic Systems, a leader in the supply of remote telemedicine diagnostics. The aim is to speed up the delivery of emergency medical care using cutting-edge communications technology which supports TeleMedic Systems technical implementation.

Central to this initiative will be VitalLink 1200 - a compact, lightweight system allowing monitoring of heart rate, blood pressure, blood oxygenation, temperature and electrocardiogram. These parameters are automatically transmitted by a satellite or terrestrial link, whichever communication is best adapted to the geographical site of the device.

Announcing the initiative at the International E-health Conference in Cardiff, Andrew Ruck, Invsat's director of sales and marketing said, "Invsat's core strengths lie in the provision of communications systems integration and satellite communications in remote locations and at sea, so a move into the provision of support for the telemedicine field is a natural step for us. VitalLink 1200 is an enhanced emergency monitoring medical system and we are delighted to be working with TeleMedic Systems to offer a wireless device that is not only compact and robust, but one that could mean the difference between life and death."

For Invsat's core offshore oil and energy and marine environment customers, VitalLink 1200 is a natural complement to the other value-add communications solutions it provides and allows anyone anywhere to be in contact with a trusted source of medical expertise

About Invsat

Invsat Limited is a wholly owned subsidiary of Inmarsat Ventures plc. The company project manages and delivers VSAT solutions, satellite and broadband networks and VPN's to a global client base, incorporating the maritime oil and gas, government and emergency services sectors. Further information is available from the Invsat website at www.invsat.com

About TeleMedic Systems

TeleMedic Systems (TMS) was established in 1995 in the UK and today has offices and partners throughout the world. TMS brought together a unique team of the world's leading medical and IT professionals to develop VitalLink 1200. The VitalLink 1200 transmitted the first ever 'air-to-ground' communication in real time of a passenger's vital signs. VitalLink 1200 is currently in use in many remote situations, including oil-rigs, cruise liners and luxury yachts throughout the world.
